PRICING INFORMATION

TO

Dr. Adam,

Department of Biophysics, AIIMS,
Ansari Nagar, New Delhi – 110029

Molecular Solutions Software Private Limited
No 110, West Village, Kodipalya, Bangalore-560060
Email: rraghu@molecularsolutions.co.in

S.NO	PRODUCT NAME	DEPLOYMENT	User	DURATION	UNIT PRICE	AMOUNT (INR)
1	SeeSAR with YASARA Plugin	Local	25	3 Years	₹ x	₹ x
2	HPSee-Chemical Space Docking (128 Cores)	Local	Floating	3 Years	₹ x	₹ x
3	infiniSee – Three Search Modes	Local	1	3 years	₹ x	₹ x
4	XFEP (Free Energy Perturbation) & XMolGen (20,000 Xunits valid for 3 years only)	Cloud	Floating	3 Years	₹ x	₹ x
5	Koffee Binding Affinity (Unlimited Concurrent Usage) & Koffee Unbinding Kinetics (1 GPU)	Local	Concurrent Usage & 1 GPU	3 Years	₹ x	₹ x
6	YASARA Structure (Includes Protein Modelling, Docking & Dynamics)	Local	1 Group License	3 Years	₹ x	₹ x
7	Retrosynthesis Modules	Cloud	3	3 Years	₹ x	₹ x
8	Condition Search Module	Cloud	3	3 Years	₹ x	₹ x
9	Nanome + MARA	Cloud	1	3 Years	₹ x	₹ x
10	Biolligence - BioTox	Cloud	1	3 Years	₹ x	₹ x

11	ADMET Predictor	Local	1	**Complimentary Renewed Annually**
			SUB TOTAL	**₹ x**
			IGST 18%	**₹ x**
			TOTAL AMOUNT INCLUDING GST	**₹ x**

TERMS & CONDITIONS

- Validity: This quotation is valid till **15 Nov 2026** from the date of issue.
- Delivery Timeline: Installation & setup within 1 week from PO confirmation.
- Payment Terms: 15 days from the date of Invoice.
- Please send your purchase order to rraghu@molecularsolutions.co.in or courier it to ***Molecular Solutions Software Pvt Ltd, 110 West Village, Kodipalya, Kengeri, Bangalore 560060, Mob: +91-9900090011***
- License Term: **3 years from date of activation.**
- Support: Comprehensive email, phone, and Online support during license period.

OUR SOFTWARE OFFERING

The Red colored ones are quoted as per your requirement, you are free to contact us if you wish to add any additional modules which are not included in the quote.

PRODUCT SEGMENT	PRODUCT NAME	DEPLOYMENT TYPE	PRODUCT DESCRIPTION
Target Identification	Commander (Genotypic)	Local	GUI-based interface bridging biology and NGS data analysis workflows.
Ultra-High Throughput Virtual Screening (Screen Trillions of compounds)	SeeSAR & Chemical Space Docking (BioSolveIT)	Local	SeeSAR: Structure Based Drug Designing Platform CSD: Ultra-fast screening of trillions of molecules for potential hits with more than 40% hit rate
	XMolGen (XtalPi)	Local / Cloud	AI-powered software for de novo molecular generation, focused-library creation, and

			virtual screening.
	InfiniSee	Local	InfiniSee is your Chemical Space navigation platform to access the universe of synthetically accessible compounds. InfiniSee delivers results within seconds, providing you with purchasable compounds and novel IP.
Hit to Lead Transformation	XFEP (XtalPi)	Local / Cloud	XFEP is a free energy perturbation calculation software that can accurately predict the binding affinity to target proteins for a wide range of ligands, including noncovalent, covalent, peptide, macrocyclic ligands, and PROTACs with high performance.
Lead Optimization	ADMET Predictor (Simulations Plus)	Local	Flagship AI / ML platform for ADMET property prediction, model building, AI-driven drug design & data analytics.
	GastroPlus (Simulations Plus)	Local	PBPK modeling to predict absorption, PK, and DDIs.
	PK/PD Modelling (Simulations Plus)	Local	Simulates PK/PD to optimize dosing regimens.
Chemical Synthesis	ChemAIRS (Chemical.AI)	Cloud	AI-powered retrosynthesis platform that helps scientists discover novel synthetic pathways for target molecules.

Molecular Modelling	YASARA (Structure, Model and Dynamics)	Local	Small molecule docking at the touch of a button. Protein modeling at the touch of a button combined with artificial intelligence predictions (AlphaFold, ESMFold, Omega fold, all run locally) Super-fast molecular dynamics algorithms for CPU and GPU and energy minimizations in non-periodic or periodic cells with cuboid or triclinic shape. Run simulations of membrane proteins and metal surface adsorption at the touch of a button.

Electronic Lab Notebook TransGene IT & Dotmatics Local / Cloud Capture and store experiments		and share with internal and external collaborators in a single, intuitive framework	to support data-driven decision making with secure, virtual notebook software.

Virtual Reality	Nanome	Local	The Ultimate Interface for Scientific Discovery AI assisted scientific copilot + multi-user spatial computing to accelerate scientific discovery drug discovery. Immersive 3D molecular visualization and collaborative drug design.
Formulation development	FormSCI SoluDEM	Cloud Cloud	An innovative stability prediction software tailored to enhance your research and development work. Our software FormSCI empowers scientists and researchers to make informed decisions, minimizing risks and maximizing efficiency. Eight Core Modules – Excipient Screening & Selection, AI Virtual Formulator, Dissolution Enhancer Selection, Skin Permeability enhancement, Temperature & Wt% Compatibility, Excipient Comparability and Stability Studies, Impurity root Cause analysis. A fast and highly accurate Solubility prediction software designed for API solubility prediction and drug solubility prediction. Eight Modules in One Platform – Solubility Prediction, Pure and Binary Solvent Screening, Crystallization Design, Polymorph Screening, Impurity Rejection, Yield Optimization, Temperature Dependent Process Modelling & Process Scale-up Intelligence.

Kvantify	Koffee™ Binding Kinetics Koffee™ Unbinding	Local Local	Koffee™ is a **computational drug discovery** technology for **classical computers**. It swiftly and accurately **ranks small molecules** based on **binding affinity**, accelerating the discovery process. Its **speed, accuracy, and simplicity** optimize modern drug design without requiring quantum hardware. Koffee™ Unbinding Kinetics **integrates kinetic**

	Kinetics Qrunch Pro	 Local	**analysis** into **early-stage drug discovery**. It uses classical computation to **model and predict** the **dissociation rate** (unbinding) of small molecules from their targets, providing crucial kinetic data quickly to optimize drug candidate selection. Qrunch is a domain-specific quantum chemistry platform designed to make advanced quantum and hybrid quantum-classical simulations accessible to chemists in life sciences,materials science, and beyond without requiring expertise in quantum computing. It abstracts hardware complexity and provides an intuitive, chemistry-first workflow that dramatically reduces time from idea to result.
